K-Knowledge Profile:

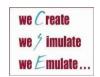

K1: A systematic, theory-based understanding of the natural sciences applicable to the discipline; **K2:** Conceptually based mathematics, numerical analysis, statistics and the formal aspects of computer and information science to support analysis and modeling applicable to the discipline; **K3:** A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline; **K4:** Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline; **K5:** Knowledge that supports engineering design in a practice area; **K6:** Knowledge of engineering practice (technology) in the practice areas in the engineering discipline; **K7:**Comprehension of the role of engineering in society and identified issues in engineering practice in the discipline: ethics and the engineer's professional responsibility to public safety; the impacts of engineering activity; economic, social, cultural, environmental and sustainability; **K8:** Engagement with selected knowledge in the research literature of the discipline

P-Range of Complex Engineering Problem Solving:

P1: Cannot be resolved without in-depth engineering knowledge at the level of one or more of K3, K4, K5, K6, or K8, which allows a fundamentals-based, first principles analytical approach; P2: Involve wide-ranging or conflicting technical, engineering, and other issues; P3: Have no obvious solution and require abstract thinking, originality in analysis to formulate suitable models; P4: Involve infrequently encountered issues; P5: Are outside problems encompassed by standards and codes of practice for professional engineering; P6: Involve diverse groups of stakeholders with widely varying needs; P7: Are high-level problems including many component parts or sub-problems

A-Range of Complex Engineering Activities:

A1: Involve the use of diverse resources (and for this purpose, resources include people, money, equipment, materials, information and technologies); A2: Require resolution of significant problems arising from interactions between wide-ranging or conflicting technical, engineering or other issues; A3: Involve creative use of engineering principles and research-based knowledge in novel ways; A4: Have significant consequences in a range of contexts, characterized by difficulty of prediction and mitigation; A5: Can extend beyond previous experiences by applying principles-based approaches
